

KWINANA AIR QUALITY BUFFER

**725. Hon LYNN MacLAREN to the Minister for Environment:**

- (1) What is the purpose of the Kwinana air quality buffer?
- (2) Will the minister confirm that the buffer between Cockburn Cement's Munster plant and residential areas, as per the Kwinana air quality buffer position paper, is about one kilometre?

**Hon DONNA FARAGHER replied:**

I thank the member for some notice of this question.

- (1) The "Review of the Kwinana Air Quality Buffer: Position Paper 2008" states that the purpose of the Kwinana air quality buffer is to protect residents outside the Kwinana industrial area and the Hope Valley – Wattleup redevelopment area from pollutants such as sulfur dioxide, risk, dust, noise, light and odour.
- (2) The buffer delineated in the "Review of the Kwinana Air Quality Buffer – Position Paper 2008" around Cockburn Cement's Munster plant is approximately 1.5 kilometres.
