SECTION 2 GOAL OF CARE	
	n 3 over the page to be valid. In discussion with the clinician.

S

patient, person responsible and/or family/carer(s), please select the most medically appropriate agreed goal of patient care that will apply in the event of clinical deterioration.

All life sustaining treatment

- For Rapid Response (MER/MET Calls)
- For CPR
- For ICU

Life extending intensive treatment – with treatment ceiling

- Not for CPR
- For Rapid Response ☐ Yes
- For ventilatory support, including intubation
- Specify maximum level of support
- For ICU/HDU admission
- Additional comments (e.g. use of inotropes, NIV, dialysis)

Active ward based treatment – with symptom and comfort care

Not for CPR

THIS SECTION TO BE COMPLETED BY A REGISTRAR OR CONSULTANT

- Not for ICU
- Not for intubation
- For Rapid Response
- For ventilatory support (intent is symptom control) \square Yes
- Specify maximum level of support
- Additional comments (e.g. use of antibiotics, IV fluids)

Optimal comfort treatment – including care of the dying person

- Not for Rapid Response
- Not for CPR
- Not for intubation
- Not for ICU
- For ongoing review to identify transition to the terminal phase
- Ensure timely commencement of the Care Plan for the Dying Person

All patients can have Rapid Response based on 'Worried Criteria' or to 'Summon Clinical Review'.

Guidance Document

Palliative Sedation Therapy

A guidance document for Palliative Medicine Specialists in Australia and New Zealand.

Definition

Palliative Sedation Therapy (PST) is the monitored use of medications to lower a patient's awareness in order to provide relief of symptoms that are refractory to usual measures, are distressing and result in considerable suffering if unrelieved (Cherny et al 2009, Morita et al 2005).

Key guidance

- ANZSPM considers PST to be an important and necessary approach in selected patients with life limiting illness with refractory symptoms, and this is aligned with the European Association for Palliative Care (EAPC) framework and recommendations (Cherny et al 2009).
- 2. ANZSPM considers PST to be an essential high level skill, which is ethically acceptable when used for selected patients with refractory symptoms in accordance with international guidelines (Cherny et al 2009).
 - PST should be considered to be an extra-ordinary measure, utilised by skilled and experienced Palliative Care Clinicians in a Multi-Disciplinary setting. PST should only be utilised after a comprehensive assessment of the patient's symptoms, psychosocial needs, and spiritual needs (Braun et al 2003). Symptoms should not be deemed refractory if the cause of unrelieved symptoms is inadequate access to and provision of palliative care or failure to provide best practice therapies (Radruch et al 2013).

The Driving Force of Palliative Medicine in Australia and New Zealand

- 3. PST needs to be distinguished from other types of sedation used in palliative care.
 - Ordinary sedation is defined as sedation used to relieve anxiety, restlessness and insomnia (Quill 2009)
 - Proportionate palliative sedation is defined as the use of medication actively titrated to relieve symptoms but not produce unconsciousness (Quill 2009)
- 4. PST is distinct from euthanasia by virtue of the intent and the action. Refer the published ANZSPM Position Statement on The Practice of Euthanasia & Physician Assisted Suicide (ANZSPM 2017).
- 5. ANZSPM supports the use of the <u>EAPC recommended framework for use of</u> sedation in palliative care (Cherny et al 2009).
 - The EAPC framework intends to ensure clinicians assess patients with refractory symptoms and apply PST in the multi-disciplinary palliative care setting within good clinical and ethical practice. The EAPC framework focuses on key areas of assessment, documentation, consent and communication. The framework provides more detailed recommendations in the following areas (Cherny et al 2009):
 - i. Approach to pre-emptive discussion of the potential role of sedation in end-of-life care and contingency planning
 - ii. Indications in which sedation may or should be considered
 - iii. The necessary evaluation and consultation procedures
 - iv. Specify consent requirements
 - v. Approach to discuss the decision-making process with the patient's family
 - vi. Sedation method, dose titration, patient monitoring and care
 - vii. Guidance for decisions regarding hydration and nutrition and concomitant medications
 - viii. Information needs and care for patient's family
 - ix. Multidisciplinary discussion and decision-making around PST and approach to disagreement.
