PARLIAMENT OF WESTERN AUSTRALIA

Introduction

Each electorate sub report contains estimates of unemployment statistics for that electorate from the June quarter 2005 through to the March quarter 2010. Data Analysis Australia was contracted to perform this analysis in April 2010.

The analysis in this report is based upon data obtained from the Small Area Labour Markets (SALM) publications that have been produced by the Department of Education, Employment and Workplace Relations (DEEWR). DEEWR estimates have in turn been produced using the Australian Bureau of Statistics (ABS) Labour Force Survey data, Census data and Centrelink data.

Note that these statistics refer to the electoral boundaries that came into effect as of the state election in September 2008 and hence are not comparable to earlier publications that used former electoral distributions.

Methodology

Published quarterly, DEEWR produces estimates of unemployment and the labour force for each of the 1,353 statistical local areas (SLA) across Australia. SLA refers to the smallest geographical unit that is available in the ABS standard geographical structure and consists of Local Government Areas (LGAs), parts thereof, or any unincorporated areas. DEEWR produces unemployment estimates for each SLA by taking the level of unemployment, which has been published by the ABS for a region, and apportioning it across each of the SLAs that fall within that region. This apportioning is in accordance with the distribution of Centrelink, Newstart and Youth Allowance (Other) beneficiaries. SALM estimates are smoothed using a four-quarter average in order to minimise the variability that is inherent in small area data. Note that from the December quarter 2009, population benchmarks based on the 2006 Census of Population and Housing were used whereas previous quarters were based on 2001 Census data, hence caution should be applied when comparing statistics before and after this time.

Using the SALM data, it is possible to construct estimates of unemployment statistics for each of the state electoral divisions (SED) in Western Australia. The estimates are based on the WA State Electoral Boundaries that came into effect as of the state election on 6 September 2008. To construct estimates for each of the electorates it is first necessary to allocate SLAs to SEDs. Some SLAs fall wholly within an electorate, others do not. When an SLA overlaps two or more electorates, the unemployment and labour force estimates for that SLA have to be apportioned between electorates. From the 2006 Census of Population and Housing it is known how the population of overlapping SLAs is distributed between electorates and this proportion is used to distribute unemployment and labour force totals. Furthermore, the data is aggregated for SLAs and part SLAs within electorates and an overall unemployment rate for each electorate is calculated. A copy of the concordance used is available upon request.

It should be noted that unemployment rates by electorate are approximations only and therefore should be treated with caution. This is due to some SLAs overlapping two or more electorates and the crude method of dealing with this issue (using population data as the basis for apportioning unemployment and labour force totals between electorates).

Unemployment rate graphs depict trends in unemployment rates for each electorate and compare these trends to the state and national average unemployment rate for each quarter. The trend for each electorate was determined by producing a polynomial regression model of order two that best fitted the unemployment rate data, and the resulting model is represented by a dotted trendline in each graph.

Definition of Unemployment Rate

Unemployed persons are defined by the ABS as those civilians aged 15 years and over who, during a period of one week (called the reference week), were not employed, but were available to start work in the reference week and had actively looked for work in the previous four weeks, or those who were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the new job had been available then.

Work is defined as work for profit, commission or payment in kind; in a job, business or farm; or without pay in a family business or farm.

The number of unemployed workers, expressed as a percentage of the labour force, is called the unemployment rate.

Table 2 Estimated Unemployment Rate Ranked by SED (Smoothed Series) December Quarter 2009

Summary of the Unemployment Rate Ranked by SED

For the March quarter 2010, unemployment rates ranged from 2.6% in Hillarys (LIB) to 8.7% in Armadale (ALP).

The average unemployment rate for Western Australia for the March quarter 2010 was 5.1%. Less than half of the WA electorates had unemployment rates that were above the state average. Of the 54.2% of WA electorates that had unemployment rates below the state average, the Liberal Party holds 17 seats (70.8% of all LIB seats), the ALP holds 9 seats (33.3% of all ALP seats), the National Party holds 4 seats (100.0% of all NAT seats) and the Independents hold 2 seats (66.6% of all IND seats).

The national average unemployment rate for the March quarter 2010 was 5.6%. The total percentage of WA electorates who had an unemployment rate below this national average was 64.4%. Of these, the Liberal Party holds 17 seats, the ALP holds 13 seats, the National Party holds 4 seats, Independents hold 3 seats and the Greens hold 1 seat.

In comparison to the December quarter 2009, Gosnells (ALP) and South Perth (LIB) experienced the greatest improvement in their unemployment rate, both down by 0.2%. Perth (ALP) experienced the greatest increase in their unemployment rate followed by Bassenden (ALP), Midland (ALP) and Swan Hills (LIB), up by 1.1%, 0.9%, 0.9% and 0.9% respectively.

Of those electorates that experienced an improvement in their ranking for the March 2010 quarter compared to the December 2009 quarter, the ALP holds 11 seats (40.7% of all ALP seats), the Liberal Party holds 9 seats (37.5% of all LIB seats), the Nationals hold 2 seats (50.0% of all NAT seats), the Independents hold 3 seat (100.0% of all IND seats) and the Greens hold 1 seat (100.0% of all GRN seats).

For those electorates that exhibited a decline in their ranking for the March 2010 quarter, in comparison to the December 2009 quarter, the Liberal Party holds 10 10 seats (41.6% of all LIB seats) and the Labor Party holds 6 seats (22.2% of all ALP seats).

Of those electorates that were ranked in the top 10 in the December 2009 quarter, 90% remained in the top 10 in the March 2010 quarter. Similarly, 100% of those electorates that were ranked 40 or above in the December 2009 quarter remained in rank 40 or above for the March 2010 quarter.

In the March 2009 quarter the unemployment rate ranged from 1.5% to 6.3%, whereas in the March 2010 quarter this range expanded and shifted to 2.6% to 8.7%. In the December quarter 2009, the unemployment rate ranged from 2.4% to 8.8%.

In the March 2010 quarter, the Hillarys and Kingsley electorates had equal and the lowest rates of unemployment while Nedlands had the lowest rate in December 2009. Armadale had the highest unemployment rate for both aforementioned quarters.

Figure 1 Estimated Unemployment Rate for Albany (Smoothed Series)

The trendline for Albany shows an initial decreasing trend but has been on the rise since December 2008. During the period of decrease it was declining at a faster rate than the state average, placing it below the state average since September 2009. Prior to June 2006, Albany’s unemployment rate was higher than the national average, though decreasing at a faster rate. Since then, with the exception of the June 2008 quarter, it has remained lower than the national average.

Figure 2 Estimated Unemployment Rate for Alfred Cove (Smoothed Series)

The trendline shows the unemployment rate for Alfred Cove following a decreasing trend from June 2005 until December 2006. Since December 2006 it had been relatively steady, however, recent quarters exhibit a clear upwards trend. Throughout this time the Alfred Cove electorate remained well below both the state and national averages.

Figure 3 Estimated Unemployment Rate for Armadale (Smoothed Series)

Armadale’s unemployment rate has remained well above the state average since June 2005. The trendline indicates a rapidly decreasing trend for the first half of the period, with Armadale's unemployment rate decreasing at a faster rate than the national average. Since December 2008, the rate has increased dramatically, causing a sharp upward trend which veers away from the national rate significantly.

Balcatta (ALP)

Figure 4 Estimated Unemployment Rate for Balcatta (Smoothed Series)

Since June 2005, Balcatta’s unemployment rate has been well above both the state and national averages. The trendline shows that the unemployment rate was initially decreasing at a faster rate than both the state and national unemployment rates, closing the gap considerably until March 2009. A substantial rise in the unemployment rate since this time places Balcatta again well above the state and national averages for the March 2010 quarter.

Figure 5 Estimated Unemployment Rate for Bassendean (Smoothed Series)

The unemployment rate for the Bassendean electorate has fluctuated above and below the national average since June 2005. This includes two extended periods of increase from June 2005 to March 2006 and June 2009 to the most recent quarter. The trendline shows a decreasing rate for the most part of the last five years, however, a slight upward trend is apparent from June 2009 onwards. Bassendean's unemployment rate fell below the state average in March 2008 where it remained until the most recent quarter.

Figure 6 Estimated Unemployment Rate for Bateman (Smoothed Series)

The unemployment rate for the Bateman electorate has been well under the state and national averages since June 2005. The trendline indicates a decrease in the unemployment rate from June 2005 until September 2007. From September 2007 until September 2008, it was fairly steady but has since followed an increasing trend. It has been increasing at a much lower rate than Western Australia's unemployment rate with the difference from the state rate at 2.6% for March 2010.

Figure 7 Estimated Unemployment Rate for Belmont (Smoothed Series)

The trendline indicates that the unemployment rate for Belmont initially followed a strong decreasing trend, however, has been on the rise since September 2007 despite the unemployment rate decreasing from March 2008 until December 2008. Since June 2005, the unemployment rate has remained well above the state average. It fluctuated around the national average from March 2007 until June 2009, however, is much higher (difference of 2.3%) than the national average in the most recent quarter.

Figure 29 Estimated Unemployment Rate for Kalgoorlie (Smoothed Series)

Aside from an initial dip, the trendline shows the unemployment rate for Kalgoorlie has been on the rise since March 2007. This is largely due to a huge jump in unemployment from September to December 2008 and the continued increasing unemployment rate as it was relatively stable in the two years prior. The spike in unemployment for the December 2008 quarter saw Kalgoorlie's unemployment rate rise above the state average where it has remained. It is very close to the national average for the most recent quarter.

Figure 32 Estimated Unemployment Rate for Kwinana (Smoothed Series)

Since June 2005 the unemployment rate for the Kwinana electorate has remained above both the national and state average. The trendline shows a steep decreasing trend in the unemployment rate between June 2005 and December 2007. From the December 2007 quarter a rapid upward trend is apparent. The initial decline was due to decreasing unemployment rate between December 2005 and March 2007. This period of declining unemployment was followed by two prolonged periods of increasing unemployment, that were interestingly interrupted by a sharp drop in unemployment between September and December 2008.
