Notes:

- Triage Category 1 = Resuscitation: recommended time is immediate (within seconds). A time interval of less than or equal to 2 minutes is used to identify Triage 1 patients that were seen within time – this is the Australian Standard.
- Triage Category 2 = Emergency: recommended time is within 10 minutes
- Triage Category 3 = Urgent: recommended time is within 30 minutes
- Triage Category 4 = Semi-urgent: recommended time is within 60 minutes
- Triage Category 5 = Non-urgent: recommended time is within 120 minutes

Table (iv): Total number of Attendances that were transferred to another hospital for admission (not necessarily by ambulance), 2011-2014 (YTD 26 October 2014)

| Hospital/Year | 2011 | 2012 | 2013 | 2014 (YTD) |
|---|------|------|------|------------|
| Augusta Hospital | 51 | 66 | 55 | 64 |
| Bunbury Hospital | 344 | 325 | 324 | 358 |
| Busselton Hospital | 126 | 431 | 675 | 743 |
| Collie Hospital | 126 | 171 | 167 | 115 |
| Margaret River Hospital | 212 | 285 | 279 | 294 |
| Donnybrook Hospital | 79 | 131 | 96 | 109 |
| Harvey Hospital | 209 | 257 | 294 | 227 |
| Nannup Hospital | 41 | 62 | 66 | 50 |
| Pemberton Hospital | 85 | 77 | 119 | 80 |
| Boyup Brook Soldiers Memorial Hospital | 59 | 63 | 75 | 78 |
| Warren Hospital | 152 | 120 | 162 | 132 |
| Bridgetown Hospital | 114 | 122 | 104 | 88 |

Note: These data are based on disposal code of 'transferred to another hospital for admission' and are a broad estimate of the total number of ambulance transfers to another hospital. EDDC data does not have the specificity to precisely answer this question regarding ambulance transfers because there can be different modes of transport for transferring patients from one hospital to another and inter-hospital transfers are not exclusively by ambulance (e.g. hospital transport).

Notes:

- The standard performance indicator 'median wait time to be seen by triage category' has been calculated for this question.
- n/a = not available and means that no patients of that triage category were recorded at that hospital in that year. Therefore it is not possible to calculate the median waiting time
- Triage 1 = Resuscitation: recommended time is immediate (within seconds). A time interval of less than or equal to 2 minutes is used to identify Triage 1 patients that were seen within time – this is the Australian Standard.
- Triage 2 = Emergency: recommended time is within 10 minutes
- Triage 3 = Urgent: recommended time is within 30 minutes
- Triage 4 = Semi-urgent: recommended time is within 60 minutes
- Triage 5 = Non-urgent: recommended time is within 120 minutes
