Symptoms, signs not elsewhere classified <sup>1</sup>	19	23	10	20	<5	<5	<5	17	<5

Note: In communities where there were less than five (5) patients <5 has been used to protect patient confidentiality.

<sup>1</sup> The International Statistical Classification of Diseases and Related Health Problems, 10th Revision, Australian Modification (ICD-10-AM), is the standardised classification system applied in all Australian acute health facilities and by the RFDS. It is based on the World Health Organisation ICD-10 system, updated with the Australian Classification of Health Interventions (ACHI), Australian Coding Standards (ACS) and ICD-O-3 (International Classification of Diseases for Oncology, 3rd edition). This category refers to less well-defined conditions and symptoms that require further review to establish a final diagnosis.
