

Greenhouse gas assessment guidance consultation

Environmental Protection Authority

Background

The Environmental Protection Authority (EPA) is an independent body. Our role is to consider and promote ways of protecting the environment and to advise the Minister for Environment.

The EPA has provided advice on greenhouse gas emissions for projects in Western Australia for more than 20 years.

We have guidelines we apply when we assess projects. We're updating our greenhouse gas emissions guidance to ensure it is current. The EPA's guidelines are not state government policy nor are they binding rules or regulation. They will be used to provide a framework for the EPA to consider the greenhouse gas emissions of future projects.

Have your say

The EPA is calling for industry and community input on how it should consider greenhouse gas emissions when assessing proposals in Western Australia.

We are inviting you to make a submission through our online Consultation Hub. You can also:

- email a submission to:
greenhousegasconsult@epa.wa.gov.au
- or send a hard copy submission to:

EPA greenhouse gas emissions assessment guidance consultation

Locked Bag 10
Joondalup DC
WA 6919

In submitting your feedback, it is important to note that the EPA intends to publish all submissions on the EPA's website under the name of the submitter. Contact details, including email addresses, postal addresses and phone numbers will not be published.

For more information on the consultation process, please see our website: epa.wa.gov.au

**The EPA's guidelines are not strict rules
or state government policy.**

**The guidelines provide a framework for the EPA
to consider the greenhouse gas emissions of
future projects.**

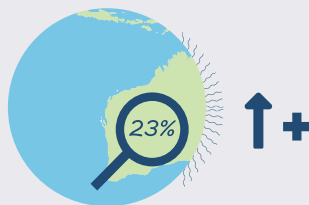

Facts

New resource and energy proposals anticipated in the coming decade are expected to add significantly to Western Australia's (and, as a result, national) emissions.

The technical guidance will be reviewed after 12 months or following any significant changes to state and Commonwealth policy.

Western Australia's greenhouse gas emissions have significantly increased above its 2005 baseline (23%).*

* State and Territory Greenhouse Gas Inventories 2017

Proposed timeline

Is this a chance to comment on the state government's climate change policy?

No. This consultation is about the greenhouse gas guidelines that inform how the EPA assesses projects in Western Australia.
