

SECTORAL EMISSIONS REDUCTION STRATEGIES

577. Hon TJORN SIBMA to the minister representing the Minister for Climate Action:

I refer to the government's sectoral emissions reduction strategies, or SERS policies.

- (1) Have the number of individual sectors requiring the development of SERS been finalised?
- (2) If yes to (1), what are these sectors?
- (3) If no to (1), when will these sectors be finalised and will the government seek to combine mineral exploration, mining and the oil and gas industries into one overall SERS?

Hon KYLE MCGINN replied:

I answer on behalf of the minister representing the Minister for Climate Action. I thank the member for some notice of the question. The following answer has been provided by the Minister for Climate Action.

- (1)–(3) The state government has committed to working with all sectors of the economy to achieve its goal of net zero emissions by 2050. Although the individual sectors for the sectoral emissions reduction strategies have not been finalised, the strategies will address all sources of emissions. These include emissions from electricity; industry, including resources and manufacturing; transport; buildings; agriculture; waste; and land use.
