

INTELLIGENT TRANSPORT SYSTEMS

775. Hon KEN TRAVERS to the parliamentary secretary representing the Minister for Transport:

- (1) Is the government still committed to implementing intelligent transport systems on freeways in Perth?
- (2) If yes, what measures will be introduced; where will they be located; when will they be constructed; and how much is currently budgeted for each measure?

Hon JIM CHOWN replied:

I thank the honourable member for some notice of this question.

- (1) Yes.
- (2) For a number of years, foundation intelligent transport system devices have been installed on freeways and major highways in Perth. These include CCTV cameras for real-time vision, optic fibre cabling for communication of devices, vehicle detection stations for real-time data, and variable message signs to provide road user information. In 2013–14, over \$2 million has been allocated for foundation ITS devices.
