

I would like to see cannabis legalised and prescribed to the general public that have medical problems and would benefit from its use, in doing so hopefully sold at a price that those in need can afford..

Many prescription drugs used are not doing the job they were intended are heavily used causing more harm than good, and becoming toxic to some users..I think now society has moved on from the days of old it's time we looked at another method of dealing with pain ...thank you. Sue Heeley
