

Cannabis needs to be accessed only via a medical practitioner
It's cause on the mental health of some people needs to be taken into account, it can and has
resulted in manic behavior and or loss of life.i have experienced the results of this first hand.
This being said I am all for medical cannabis under supervision ,this is a complete different story I
know many epileptic seizure are reduced by this along with other medical symptoms like nausea
So I think you need to make 2 decisions
Do not legalise it as a grow what you want open slather
But Legalise it's medical use urgently
