

Predictive Technologies Using Artificial Intelligence

Presented by: Bimal Kaul

Objective: Create 150,000 New Jobs by 2024

Diversify WA

**Strong Economy
Creating Jobs
Diverse Industries**

July 2019

Priority Sectors

- Mining & METS
- Energy
- Tourism & Events
- International Education
- Technology & Manufacturing
- Primary Industries

I believe that Western Australia can contribute to achieving its goal of a strong resilient economy by partnering with India-based Artificial Intelligence (AI) Companies

Mining and METS

Western Australia will build on its strong mining and METS sectors to achieve sustainable growth and production rates, along with expansion into new and emerging minerals such as lithium.

Key exports (2017-18):
Iron Ore: \$62.3 billion
Gold: \$17 billion
Alumina: \$8.7 billion

Western Australia has a long pipeline of mining projects, **estimated to be worth \$108 billion** (Sept 2018), of which \$36 billion are either committed or already under construction.

One of the **Top 5** most attractive jurisdictions in the world for mining.

Produced more than **50%** of the national total mineral and energy exports in 2017.

WA is the world's biggest exporter of iron ore.

95% of iron ore exported to Asia.

We are home to over 350 METS companies and produce 60 per cent of mining software globally.

More than 50 different minerals are mined in WA.

Energy

Western Australia is a **global powerhouse** for energy exports.

13.9% World LNG exports¹

41% of world lithium supplied by WA²

WA is home to **world-leading innovation in microgrid technologies**³

16.2% generation by renewables⁴

World's second biggest producer of **Rare Earths**⁵

Primary industries

Western Australia will be a leading producer of premium value-added agricultural products and renowned for its innovative approaches to primary industries such as agriculture, forestry and aquaculture.

Agri-food exports from WA make up **13.2%** of total Australian Agri-food exports.

More than **80%** of Western Australian agri-food is exported.

Major exports:
48% Cereals and Grains
18% Pulses, pastures and oilseeds
15% Meat and livestock products

WA agri-food exports **\$6.3 billion** (2017/18)

WA produces **more grain** than any other state in Australia.

Industry Benefits

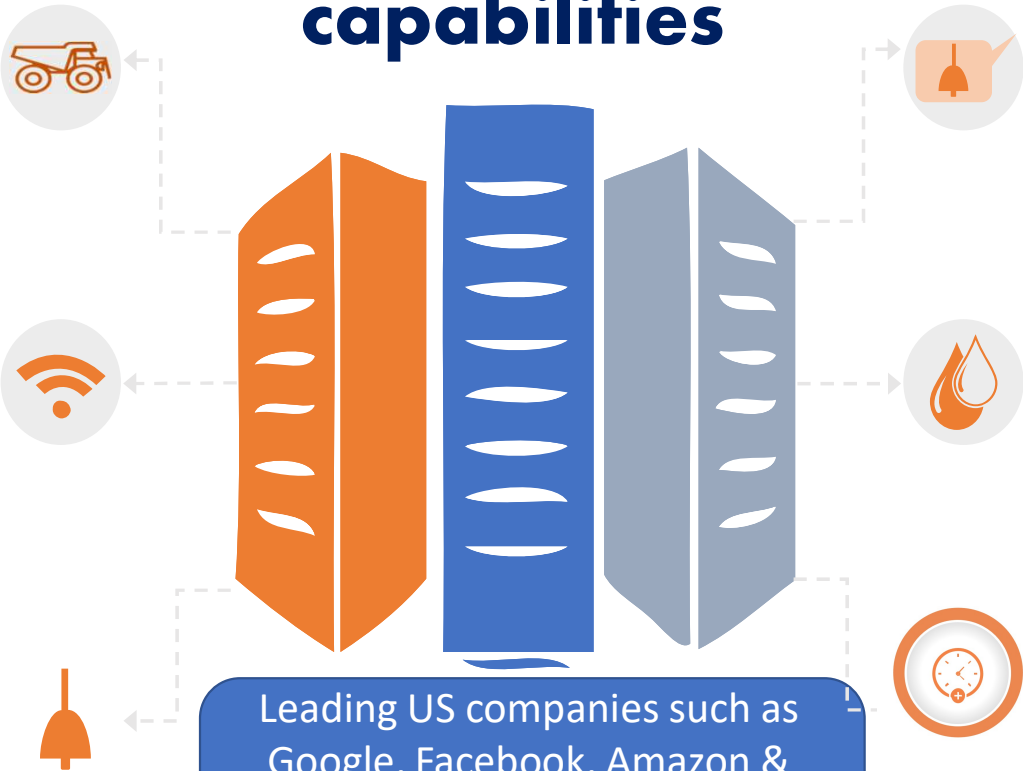

Benefits	Mining & Mets	Energy	Primary Industries
Cost Savings	<ul style="list-style-type: none"> Optimize Haul Cycle Time - \$50 M Process optimization – 10% increase in production 	<ul style="list-style-type: none"> Predictive Machinery Maintenance Detect signs of corrosion 	Detect plant disease, pests & poor plant nutrition through image recognition
Faster Decisions	Detect potential failure planes on rock surfaces 3x faster	<ul style="list-style-type: none"> Assistance with chat bots for field operators 	Seasonal forecasting to adjust water & fertilizer usage
Improved Health & Safety	Identifying gaps in operator capabilities	Monitor PPE usage 24x7	“see & spray” for pest & weed control
Smaller Environmental Footprint	Optimize energy usage – 3% reduction	Reduce methane flaring by accurate production forecasting	Precision sowing
Quality Improvement	Identifying metal grade through image recognition	Utilize real time telemetry to predict product mix	Field inspection using drones Identify farm produce output through image recognition

India is a leading country for AI talent & capabilities

Strong existing IT sector has been focused on developing strong AI capabilities

3rd largest number of AI engineers & startups (after US & China)

Leading US companies such as Google, Facebook, Amazon & Microsoft are already leveraging India as a base for AI development

Fluent English-speaking qualified workforce

Indian Government committed to developing AI as a national capability

India is 2:30 hours behind of **WA**.
The most convenient **time** to accommodate Co-working on Projects

A Case Of Big Data Implementation

Client has 250 such sensors on every truck emitting almost 100 GB of data every year

Example 1 – Optimization Haul Cycle For An Open Pit Mine

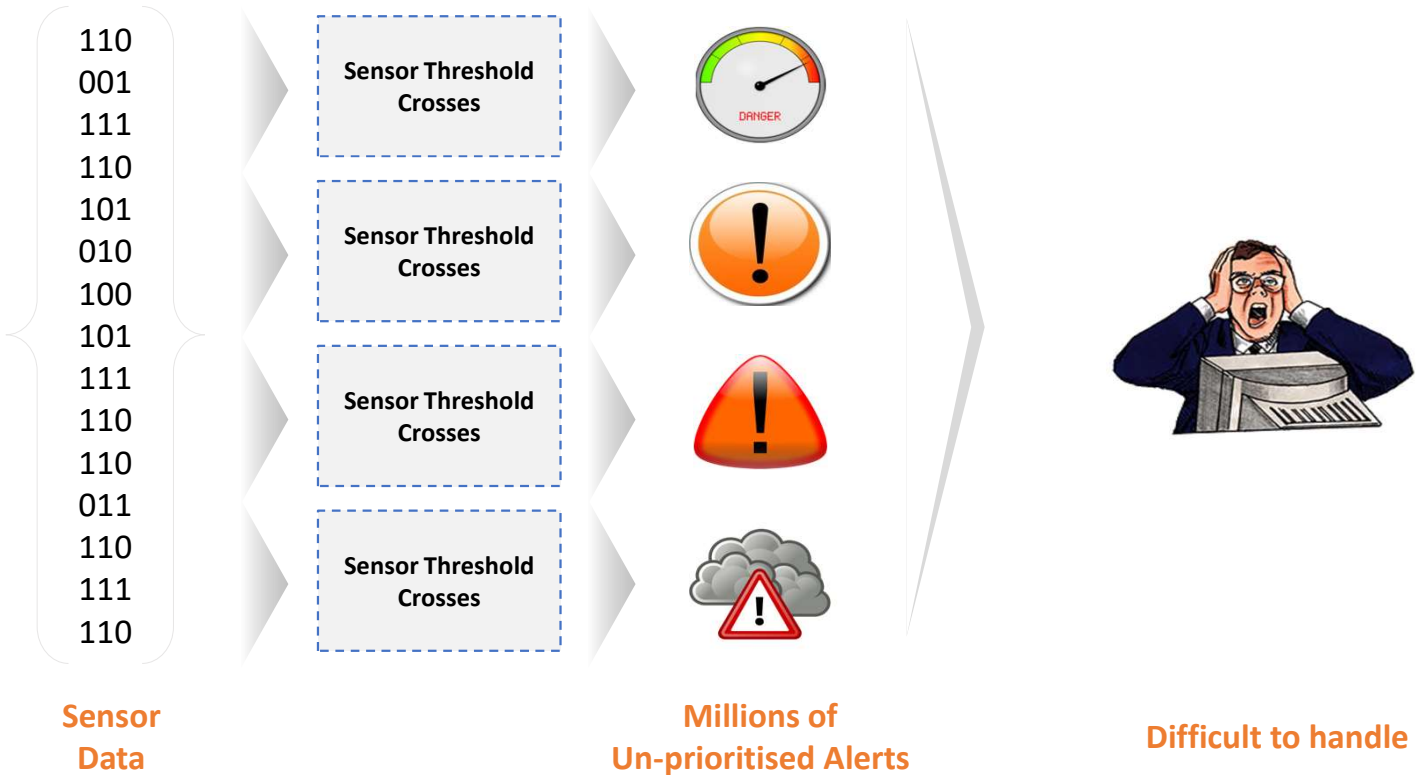

Haul Cycle Optimization

- ▶ Improving the efficiency of a haul (from shovel to dump) cycle is of utmost importance for the mining business
- ▶ Identifying root causes of inefficiency in haul cycle could help in:
 - Optimizing Fleet Utilization
 - Pre-emptive road maintenance
 - Defining best Operator's practices / Best route utilisation

Alerts!! - Lots Of Them

- ▶ More than 1000 kinds of alerts
- ▶ With over 250 trucks, there can be more than 20 alerts generated per minute

Prioritization Of Alerts – How Is It Done?

Millions of Uncategorized Alerts

Data: Effect of the alert

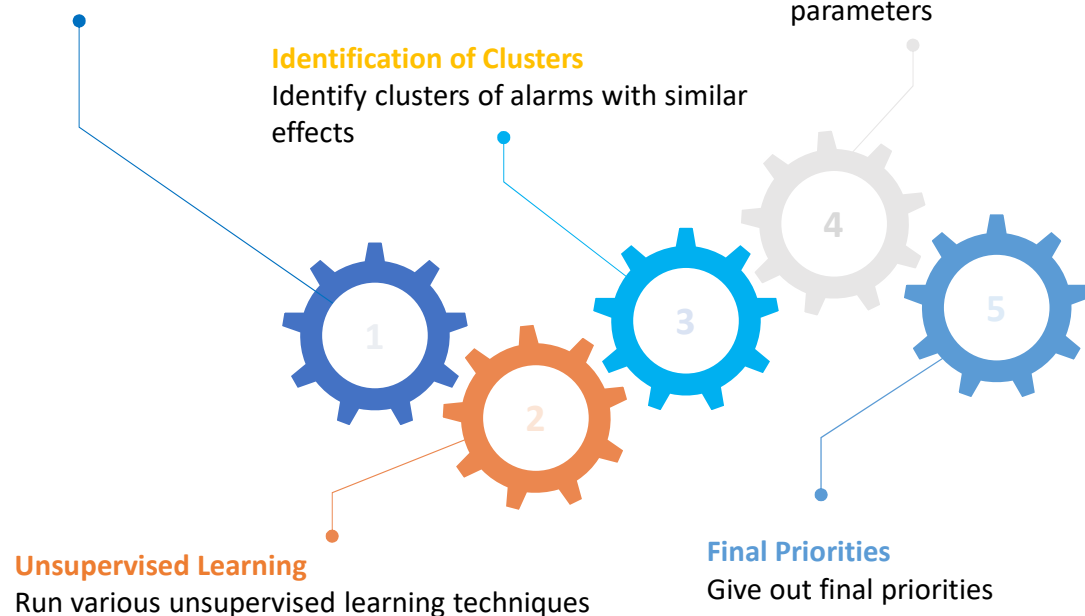

Identify what happens in the aftermath of the alert

Identification of Clusters

Identify clusters of alarms with similar effects

Profiling and defining priorities

Profile similar alarms according to profiling parameters

In a current M2M data project, the number of alarms which had to be taken care of immediately was 3% of the total alarms
