## Introduction

Each electorate sub report contains estimates of unemployment statistics for that electorate from the June quarter 2006 through to the March quarter 2011. Data Analysis Australia was contracted to perform this analysis in February 2011.

The analysis in this report is based upon data obtained from the Small Area Labour Markets (SALM) publications that have been produced by the Department of Education, Employment and Workplace Relations (DEEWR). DEEWR estimates have in turn been produced using the Australian Bureau of Statistics (ABS) Labour Force Survey data, Census data and Centrelink data.

Note that these statistics refer to the electoral boundaries that came into effect as of the state election in September 2008 and hence are not comparable to earlier publications that used former electoral distributions.

## Methodology

Published quarterly, DEEWR produces estimates of unemployment and the labour force for each of the 1,353 statistical local areas (SLAs) across Australia. SLA refers to the smallest geographical unit that is available in the ABS standard geographical structure and consists of Local Government Areas (LGAs), parts thereof, or any unincorporated areas. DEEWR produces unemployment estimates for each SLA by taking the level of unemployment, which has been published by the ABS for a region, and apportioning it across each of the SLAs that fall within that region. This apportioning is in accordance with the distribution of Centrelink, Newstart and Youth Allowance (Other) beneficiaries. SALM estimates are smoothed using a four-quarter average in order to minimise the variability that is inherent in small area data. Note that from the December quarter 2009, population benchmarks based on the 2006 Census of Population and Housing were used whereas previous quarters were based on 2001 Census data, hence caution should be applied when comparing statistics before and after this time.

Using the SALM data, it is possible to construct estimates of unemployment statistics for each of the state electoral divisions (SED) in Western Australia. The estimates are based on the WA State Electoral Boundaries that came into effect as of the state election on 6 September 2008. To construct estimates for each of the electorates it is first necessary to allocate SLAs to SEDs. Some SLAs fall wholly within an electorate, others do not. When an SLA overlaps two or more electorates, the unemployment and labour force estimates for that SLA have to be apportioned between electorates. From the 2006 Census of Population and Housing it is known how the population of overlapping SLAs is distributed between electorates and this proportion is used to distribute unemployment and labour force totals. Furthermore, the data is aggregated for SLAs and part SLAs within electorates and an overall unemployment rate for each electorate is calculated. A copy of the concordance used is available upon request.

It should be noted that unemployment rates by electorate are approximations only and therefore should be treated with caution. This is due to some SLAs overlapping two or more electorates and the crude method of dealing with this issue (using population data as the basis for apportioning unemployment and labour force totals between electorates).

The graphs in this publication display unemployment rates for each electorate and compare them to the state and national average unemployment rate for each quarter. In previous editions of this publication a trendline for each electorate was determined by producing a polynomial regression model of order two (represented by a dotted trendline in each graph). However, with the change in unemployment rates experienced over the most recent year and differences at the electorate level this is no longer appropriate and the trendline has been dropped for this release.

## Party Abbreviations

The following abbreviations for parties have been used. The political parties shown against each seat are as they stand currently.

ALP          Australian Labor Party

IND          Independents

LIB          Liberal Party

NAT          The Nationals

## Definition of Unemployment Rate

Unemployed persons are defined by the ABS as those civilians aged 15 years and over who, during a period of one week (called the reference week), were not employed, but were available to start work in the reference week and had actively looked for work in the previous four weeks, or those who were waiting to start a new job within four weeks from the end of the reference week and could have started in the reference week if the new job had been available then.

Work is defined as work for profit, commission or payment in kind; in a job, business or farm; or without pay in a family business or farm.

The number of unemployed workers, expressed as a percentage of the labour force, is called the unemployment rate.

**Table 2 Estimated Unemployment Rate Ranked by SED (Smoothed Series) December Quarter 2010**

## Summary of the Unemployment Rate Ranked by SED

For the March quarter 2011, unemployment rates ranged from 2.1% in Hillarys (LIB), Kingsley (LIB) and South Perth (LIB) to 8.7% in Kwinana (ALP).

The average unemployment rate for Western Australia for the March quarter 2011 was 4.4%. Less than half of the WA electorates had unemployment rates that were above the state average. Of the 52.5% of WA electorates that had unemployment rates below the state average, the Liberal Party holds 16 seats (66.7% of all LIB seats), the Labor Party holds 8 seats (30.8% of all ALP seats), the National Party holds 4 seats (80.0% of all NAT seats) and the Independents hold 3 seats (75.0% of all IND seats).

The national average unemployment rate for the March quarter 2011 was 5.1%. The total percentage of WA electorates who had an unemployment rate below this national average was 76.3%. Of these, the Liberal Party holds 22 seats (91.7% of all LIB seats), the Labor Party holds 14 seats (53.8% of all ALP seats), the National Party holds 5 seats (100.0% of all NAT seats) and the Independents hold 4 seats (100.0% of all IND seats).

In comparison to the December quarter 2010, Perth (ALP) and Kwinana (ALP) experienced the greatest improvement in their unemployment rate, down by 1.0% and 0.7%, respectively. Bunbury (LIB) experienced the greatest increase (0.4%) in their unemployment rate followed by Albany (ALP), Mandurah (ALP) and Dawesville (LIB).

Of those electorates that experienced an improvement in their ranking for the March 2011 quarter compared to the December 2010 quarter, the Labor Party holds 12 seats (46.2% of all ALP seats), the Liberal Party holds 8 seats (33.3% of all LIB seats) and the Nationals and Independents hold 3 seats each (60.0% of all NAT seats and 75.0% of all IND seats).

For those electorates that exhibited a decline in their ranking for the March 2011 quarter, in comparison to the December 2010 quarter, the Liberal and Labor Parties each hold 11 seats (45.8% of all LIB seats and 42.3% of all ALP seats) and the Nationals hold 2 seats (40.0% of all NAT seats).

Of those electorates that were ranked in the top 10 in the December 2010 quarter, all remained in the top 10 in the March 2011 quarter. Similarly, 90.0% of those electorates that were ranked 40 or above in the December 2010 quarter remained in rank 40 or above for the March 2011 quarter.

In the March 2010 quarter the unemployment rate ranged from 2.6% to 8.7%. The range for the March 2011 quarter was slightly wider but in the same vicinity, ranging from 2.1% to 8.7%. In the December quarter 2010, the unemployment rate ranged from 2.1% to 9.4%.

The Hillarys (LIB), Kingsley (LIB) and South Perth (LIB) electorates had equal and the lowest rates of unemployment for both the March 2011 and December 2010 quarters. Hillarys (LIB) and Kingsley (LIB) also shared the lowest rate for the March 2010 quarter. Kwinana (ALP) had the highest unemployment rate for the March 2011 and December 2010 quarters while the Armadale (ALP) electorate was the the highest for the March 2010 quarter.

**Figure 1 Estimated Unemployment Rate for Albany (Smoothed Series)**

Albany's crime rate was higher than the state average for the first two-thirds of the period after which an increase in the state rate caused it to drop below. It remained lower than the national rate for most of the period shown but an increase in the most recent quarter has seen it exceed the state average and almost equal the national rate.

**Figure 2 Estimated Unemployment Rate for Alfred Cove (Smoothed Series)**

The unemployment rate for Alfred Cove electorate was quite steady for the first half of the period with a gently increasing rate evident since December 2008. Alfred Cove's unemployment rate remained well below both the state and national averages for the entire period shown.

### Armadale (ALP)

SED Name (Party)	Jun 06	Sep 06	Dec 06	Mar 07	Jun 07	Sep 07	Dec 07	Mar 08	Jun 08	Sep 08	Dec 08	Mar 09	Jun 09	Sep 09	Dec 09	Mar 10	Jun 10	Sep 10	Dec 10	Mar 11

**Figure 3 Estimated Unemployment Rate for Armadale (Smoothed Series)**

Armadale's unemployment rate remained above the national average and well above the state average for the entire period shown. From December 2008 to December 2009 Armadale's rate showed a dramatic increase, peaking in December 2009 at 3.9% higher than the state average. A subsequent decrease has narrowed the gap although a rise is again evident in recent quarters.

### Balcatta (ALP)

SED Name (Party)	Jun 06	Sep 06	Dec 06	Mar 07	Jun 07	Sep 07	Dec 07	Mar 08	Jun 08	Sep 08	Dec 08	Mar 09	Jun 09	Sep 09	Dec 09	Mar 10	Jun 10	Sep 10	Dec 10	Mar 11

**Figure 4 Estimated Unemployment Rate for Balcatta (Smoothed Series)**

Since June 2006, Balcatta’s unemployment rate has been well above both the state and national averages, with the gap gradually narrowing over the first half of the period. A substantial rise in the Balcatta’s unemployment rate since March 2009 places it again well above the state and national averages, despite a decrease in the most recent quarters.

### Bassendean (ALP)

SED Name (Party)	Jun 06	Sep 06	Dec 06	Mar 07	Jun 07	Sep 07	Dec 07	Mar 08	Jun 08	Sep 08	Dec 08	Mar 09	Jun 09	Sep 09	Dec 09	Mar 10	Jun 10	Sep 10	Dec 10	Mar 11

**Figure 5 Estimated Unemployment Rate for Bassendean (Smoothed Series)**

The unemployment rate for the Bassendean electorate has fluctuated above and below the state average, but remained mostly below the national average for the five year period since June 2006. An extended period of increase from June 2009 to June 2010 takes the rate above both averages for most of the most recent quarters.

### Bateman (LIB)

SED Name (Party)	Jun 06	Sep 06	Dec 06	Mar 07	Jun 07	Sep 07	Dec 07	Mar 08	Jun 08	Sep 08	Dec 08	Mar 09	Jun 09	Sep 09	Dec 09	Mar 10	Jun 10	Sep 10	Dec 10	Mar 11

**Figure 6 Estimated Unemployment Rate for Bateman (Smoothed Series)**

The unemployment rate for the Bateman electorate has been well under the state and national averages since June 2006. Since December 2008 it has been gradually increasing, though a slight drop has occurred in Bateman's unemployment rate for the most recent quarter.

### Belmont (ALP)

SED Name (Party)	Jun 06	Sep 06	Dec 06	Mar 07	Jun 07	Sep 07	Dec 07	Mar 08	Jun 08	Sep 08	Dec 08	Mar 09	Jun 09	Sep 09	Dec 09	Mar 10	Jun 10	Sep 10	Dec 10	Mar 11

**Figure 7 Estimated Unemployment Rate for Belmont (Smoothed Series)**

For the entire five-year period the unemployment rate for Belmont has remained well above the state average. It fluctuated around the national average from March 2007 to June 2009 when a period of dramatic increase placed it almost 2% higher than the national average by December 2009. It has subsequently decreased to be on par with the national average in recent quarters.
